Prepared for **n8n** — Head of Product Design

Design leader who has spent three product cycles doing exactly what n8n needs next: setting a craft bar a growing team can build toward, and using it to open a complex, builder-loved product to a much wider audience without losing what power users love. Across climate tech, sleep science, and a 120-person design org, I've managed managers, built research practice from scratch, and made design a co-equal voice in product strategy rather than a downstream function. I still ship hands-on, use AI tools daily, and want to keep doing both at n8n's scale.

WHERE I LEAD

Product Design Leadership

Complex Product Systems

Craft Authority & Quality Bar

Strategic Influence

AI-Era Product Judgment

Research Practice Building

Org Design & Performance Management

Data-Informed Decisions

Product-Led Growth

Open-Source & Community Products

EXPERIENCE

Sleep Cycle · Gothenburg · 40 people

Oct 2024 – Present

UX & Discovery Lead (Sep 2025–), previously Senior Product Designer

- Lead discovery across 4 product teams within a 40-person org, sustaining 18 months of unbroken weekly user interviews, the kind of research rhythm a first dedicated UX research practice is built on.
- Built AI-assisted synthesis workflows and a Notion-based JTBD knowledge system that turn interview data into shared evidence the whole product org uses, not a research silo.
- Operate as the cross-functional glue between design, product and engineering, translating discovery findings into roadmap input and de-risking decisions before they reach a brief.

CarbonCloud · Gothenburg · Climate-tech B2B SaaS

Feb 2020 – Oct 2024

VP of Product / Head of Product (2022–24), previously VP of UX, UX Designer

- Joined as employee #10 and first design hire, scaling with the company to 45 people while growing into VP of UX, then VP of Product.
- Introduced and evolved product-led growth frameworks, leading product strategy, roadmapping and growth modelling directly with founders and GTM leadership.
- Built and led a product team of 3 at peak, owning the handoff between design, strategy and delivery in a technically dense, data-heavy product.

Chief Design Officer

- Led a 120-person design organisation as CDO, managing 5 Design Directors who each led their own teams, the closest structural parallel to n8n's Design Leads.
- Drove the evolution of design competence as the firm grew from a 60-person senior-only agency to 120 people with a real junior talent pipeline, building skills-based recruitment testing and structured competence-sharing.
- Designed assignment and review processes that balanced junior learning with senior-grade delivery quality, the same tension between raising the floor and protecting the ceiling.

UX Director, previously Interaction Designer

- Started as Interaction Designer on medical devices and consumer products, first role out of Chalmers, on the Volvo Cars account, then became UX Director setting the quality bar on complex, regulated engagements including AstraZeneca as a senior practitioner.

ACHIEVEMENTS**Scaling With a Climate-Tech Builder**

Joined CarbonCloud as employee #10 and first design hire. Grew with the company to 45 people, became VP of Product, and led PLG strategy and roadmapping with a team of 3 at peak.

An Unbroken Discovery Cadence

18 months of weekly user interviews, sustained across 4 product teams at Sleep Cycle with zero gaps. Discovery treated as infrastructure, not a sprint ritual.

Growing a Design Org's Talent Pipeline

As CDO, grew inUse's design org from a 60-person senior-only agency to 120 people with a working junior pipeline, managing 5 Design Directors and building the systems to get there.

AI in the Daily Workflow, Not the Roadmap

Built and use AI-assisted synthesis workflows and a living knowledge system at Sleep Cycle every week, practical AI adoption already running, not aspirational.

EDUCATION**M.Sc. Industrial Design Engineering**

Chalmers University of Technology, 2005–2010

Minor: Cognitive Ergonomics

TOOLS & PRACTICE

Figma

Design Systems

Notion

JTBD Frameworks

AI-Assisted Research

Product Roadmapping

Growth Modelling

Continuous Discovery
